Secure Firmware Update for Embedded Systems

Modern electronic devices require a firmware update mechanism!

But, is the firmware update secure and reliable?

Especially the firmware update allows various attacking options. Therefore SEVENSTAX developed a firmware update process, which fulfills all requirements regarding to security and reliability.

Your devices and its firmware are protected at every moment against:

- errors during the firmware transfer
- manipulation of the firmware
- piracy of the software

As a matter of course the firmware can be transferred flexibly and comfortably using [SEVENSTAX communication software](#)

- together with an automatic update procedure through a server in the internet
- for individual updates ([SEVENSTAX Webserver](#))
- and a pc application for automatic updates executed by servicing staff

Contact us for detailed information about SEVENSTAX firmware update solutions.
